

During the mobility I have established excellent relations with colleagues from Department of Electrical engineering, Chemistry and Industrial engineering, who provide me with good insight in the Department, its academic structure, study programmes, facilities offered to students and research laboratories. We discussed about future projects with prof Candida Milone. International relation office welcomed me very warmly. Thanks everyone, especially our contact SMS NatRisk responsible person prof Giuseppe Aronica for great organization and support.

My special cultural impression is Regional Museum of Messina.
