

## **Impressions from Traineeship program of NatRisk Project in Flood Hazard Research Center, Middlesex University, London, UK**

The Traineeship program was a wonderful experience for us- students from City of Nis, Serbia. In practice, we were part of NatRisk Project Traineeship program in period from 5 May to 4 July 2019 at the Flood Hazard Research Center, Middlesex University of London, UK. We are happy that we have been given the opportunity to spend an incredible two months of traineeship in the mentioned institution, and that we had enough time to get to know and explore beauty of Royal City of London and British culture. Within the student traineeship program of the NatRisk project, we carried out research work on Contemporary architectural and urban solutions for the fight against floods. We did the research work under the mentorship of Dr. Simon McCarthy from the FHRC team. During the mentioned research work, we had the opportunity to learn a lot of new and useful information about contemporary world trends in the field of flood protection, which will greatly benefit us in our further career. Also, the student practice was very important to us because we were introduced to the work of European research centers and universities.

We are grateful to the NatRisk team and to the Erasmus+ Project team that gave us the opportunity for this traineeship.

Students of University of Nis, Republic of Serbia, who attended mentioned Traineeship program

Boris Rancev and Ana Andjelkovic

 **NatRisk**

Co-funded by the  
European Programme  
of the European Union 

Development of master curricula for  
natural disasters risk management in Western Balkan countries (NatRisk)
