

I did some research in the elective field of master's thesis. My master's thesis is almost all about Hydrology so I was attending on the classes of Hydrology. Also my master thesis request knowledge of software QGIS so I had to do same exams which their students had to do to pass the subject called Application QGIS in a Hydrotechnics. After that I was attended student presentations on the "Application on QGIS on Hydrotechnics". My master's thesis mentor made possible my visit to the Republic Hydrometeorological Institute. I had a really nice time in there. They gave me information about water meter stations in Serbia and their transformations through the time. I was there for the first time in my life, when they were letting go stratospheric balloon in the air. It was very interesting and they meet me with that event really good, how they let balloon in the air and which data they get by it. My mentor helped me a lot in working in software HEC-SSP, because that was first time I meet that software, like QGIS. Beside Hydrology we've visited laboratory for Hydraulics. We had practice there for all things which we only read in books.

I don't have any remarks. All of professors and students were very kind and friendly. Professors learned us a lot of new things and even show us practice in their laboratories.

I have chosen this University because they have more developed classrooms and laboratories. Also, they have much better extracurricular activities for us, students. Niš is really beautiful city and traveling and meeting other cultures can significantly improve our knowledge and thinking. Meeting new professors and colleagues will also make easier our cooperation on a future projects.

Exploring and getting to know the historic core of the city as well as its environment.

I meet two new software (QGIS and HEC-SSP). Also, I meet new friends and professors. I worked for the first time in laboratory and gain new skills. Also I met one new city and all of his main locations.

We had practice in laboratory for Hydraulics for everything we read in books before.

I met new friends from Serbia and Montenegro. I think that meeting new colleagues will also make easier our cooperation on a future projects.

Serbian language is close to Bosnian, so there wasn't any problems and no need for improvement.

I think we should get our first scholarship before we go in new city. I also think that we should have same schedule for all students who comes in Niš (in my case), that we should come in the same time from all countries, so we can meet each other and have a good time.
