

There are two main things that I discover after this traineeship with Erasmus, the first one is how much fun one can have programming and the second one is the amazing people that lives in Serbia. Although this is not my first time living in different country than mine, normally at the beginning there is a shock because of the cultural differences, but here...no...I had a huge surprise when I realized how similar our cultures are, specially if you consider that we are around 10.000 kms away.

This experience in Nis has been rewarding, I'm leaving the city with the satisfaction of learning a lot more than what I expected, not only professionally but in many other aspects, I hope I'm able to come back (soon). I'm thankful with the people I worked with, the people I met and the places I visited. Here I got also the chance to learn about the cultural events and history of the city.

With the help of Prof. Milan Gocic we create an App with RStudio, in order to have easy access to Precipitation Data from all stations in Serbia, hoping that this will lead to future developments with any meteorological data, and why not ...to help to automatize the national data bank. I hope my collaboration in this project will help further investigations, students or researchers in the country.

Thank you!
